Altron Nexus a division of Altron TMT is a South African ICT Solutions Company that provides products and services across multiple networks and technologies whether it be Narrowband, Broadband, Fixed or Wireless.

The partnership between Altron Nexus and Huawei began in 2012 and coincided with Altron Nexus being awarded the Gauteng Provincial Government Broadband Network (GBN) project. The GBN is a transport layer network being deployed by Altron Nexus, using Huawei networking equipment, to carry multiple broadband services including but not limited to voice, data and video traffic. Multiple services and applications are required to run over this network and are currently being provided to over 1600 sites throughout Gauteng.

Altron Nexus was successfully awarded several projects in collaboration with Huawei to deliver communications solutions,:

- The GSM-R Network for PRASA [Passenger Rail Association of South Africa]– Altron Nexus delivered multiple networks across South Africa.
- The Ekurhuleni Wi-Fi Network – Altron Nexus delivered a corporate and a public Wi-Fi network to cover sites within the Ekurhuleni Municipal Metro.
- City of Tshwane Broadband services – Altron Nexus to provide connectivity for municipal sites that belong to the City of Tshwane.
- Limpopo Broadband Network – Altron Nexus is rolling out a broadband network in the Limpopo province to enable connectivity across the entire province
- The GBN phase II project worth ZAR 2.5 Billion (delivered over three years) was awarded by SITA to Altron Nexus towards the end of 2018

In 2012 when Altron Nexus started working on the Gauteng Broadband Network, it was clear that our customers required a Service Provider that can deliver all their technologies as a complete turnkey solution. This included the design, build, operate and transfer activities.

Altron Nexus started looking for Service Providers who would be able to support Altron in delivering end-to-end services and Huawei proved to be a cutting-edge partner capable of providing products and services in all verticals of communication.

Over the past six years, our relationship with Huawei has grown and matured substantially. Our Partnership with Huawei is built on collaboration, trust, communication and a shared vision of customer service excellence. We find ourselves in a position, where Nexus can develop world class solutions with Huawei in a collaborative manner.

We have multiple projects that we must deliver in 2019. Running parallel with this, is our strategy to develop new and innovative solutions with Huawei. We want to be in a position where we will be able to roll-out new solutions as soon as they have been showcased to prospective clients.
